

# DANIEL B. TURNER

I currently harness big datasets and statistical models to parameterize patterns in ecology. I have studied animals and plants from across the Americas, and I seek to develop novel data science methods to facilitate multilateral knowledge exchange between technical and non-technical audiences.

## RESEARCH EXPERIENCE

current  
|  
2018

### **Graduate Research Assistant**

Wetzel Lab

📍 Michigan State University

- Conducting meta-analysis on introduced plants and their novel interactions with local herbivore communities
- Investigating priority effects on temporal ecology using the tall golden-rod *Solidago altissima* - herbivore model system

### **Undergraduate Researcher**

Hedges Lab

📍 Temple University

- Performed PCR and created phylogenetic trees for newly-discovered toad species from the Dominican Republic
- Collected and analyzed morphological trait data from Hispaniolan frogs

## TEACHING EXPERIENCE

2020  
|  
2020

### **Statistical Methods for Temporal Ecology**

MSU Department of Entomology

📍 East Lansing, MI

- Co-taught graduate seminar in time series analysis (ARIMA, Bayesian time series analysis)
- 9 students

2020  
|  
2019

### **Insects, Globalization, and Sustainability Laboratory**

MSU Center for Integrative Studies

📍 East Lansing, MI

- Taught laboratory course for non-STEM majors in insect biology and statistics
- 160 students across two semesters

2018  
|  
2018

### **Principles of Ecology**

Temple University

📍 Philadelphia, PA

- Teaching assistant; wrote quizzes and held study sessions
- 200 students

To me, data science and the humanities are interdependent; statistical significance cannot be interpreted well without meaningful context.

For my students and mentees, I seek to provide an open and accepting environment with hands-on experience in ecology, statistics, and tidy data principles.
